Future Opportunities to Leverage the Alzheimer's Disease Neuroimaging Initiative: Workshop Summary

The Institute of Medicine held a workshop on July 12, 2010, to explore opportunities to use information from ADNI. The Alzheimer's Disease Neuroimaging Initiative (ADNI), a public-private partnership, provides a publicly available dataset of magnetic resonance imaging (MRI), optical coherence tomography (OCT), and cerebrospinal fluid (CSF) biomarker data from a large, longitudinally followed, multicenter cohort of patients with Alzheimer's disease (AD), mild cognitive impairment (MCI), and healthy controls. The workshop focused on leveraging the ADNI data to advance the understanding of the biological mechanisms underlying AD and related neurodegenerative conditions.

The work of the ADNI PET core will entail an overview of future directions to maximize the utility of the ADNI PET data. The discussion will address the potential for ADNI PET data to support future research, including validation, and an overview of the image data archive slides from this workshop are included.

Chameleon iPortal Browse Results - Universiti. 10 Dec 2010. The Alzheimer's Disease Neuroimaging Initiative ADNI, The IOM held a workshop on July 12, 2010, to explore opportunities to use future opportunities to leverage the Alzheimer's Disease Neuroimaging Initiative: Workshop Summary. Institute of Medicine US Forum on Neuroscience and Nervous System Disorders. Future Opportunities to Leverage the Alzheimer's Disease Neuroimaging Initiative Exploring Commonalities Across Diseases is the summary of a workshop hosted by the Institute of Medicine in 2011. The workshop was held on July 12, 2010, at the National Academy of Sciences, 2101 Constitution Avenue NW, Washington, DC. The workshop focused on how the ADNI data can be leveraged to advance the understanding of the biological mechanisms underlying Alzheimer's disease and related neurodegenerative conditions.

Brain multiplexes reveal morphological connectional biomarkers. 5 Nov 2014. Workshops that brought together representatives of industry, government including both research funding and field than by the Alzheimer's Disease Neuroimaging Initiative, a public-private partnership, provides a publicly available dataset of MRI, OCT, and CSF biomarker data from a large, longitudinally followed, multicenter cohort of patients with Alzheimer's disease, MCI, and healthy controls.
